MATERIALS	CRITERIA		ACCOUNT

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 2001).

There are a number of reasons for this increase. One of the main reasons is the increase in the world population. The world population is expected to reach 8 billion by the year 2025 (UN 2001). This increase in population is putting a strain on the world's food resources.

Another reason for the increase in undernourishment is the increase in the number of people who are living in poverty. In 1990, 1.2 billion people were living on less than \$1 per day. By 2001, this number had increased to 1.6 billion (World Bank 2001).

The increase in undernourishment is also due to the increase in the number of people who are living in rural areas. In 1990, 50% of the world's population was living in rural areas. By 2001, this number had increased to 55% (UN 2001).

The increase in undernourishment is also due to the increase in the number of people who are living in urban areas. In 1990, 40% of the world's population was living in urban areas. By 2001, this number had increased to 45% (UN 2001).

The increase in undernourishment is also due to the increase in the number of people who are living in slums. In 1990, 1 billion people were living in slums. By 2001, this number had increased to 1.5 billion (UN 2001).

The increase in undernourishment is also due to the increase in the number of people who are living in informal settlements. In 1990, 1 billion people were living in informal settlements. By 2001, this number had increased to 1.5 billion (UN 2001).

The increase in undernourishment is also due to the increase in the number of people who are living in shanty towns. In 1990, 1 billion people were living in shanty towns. By 2001, this number had increased to 1.5 billion (UN 2001).

The increase in undernourishment is also due to the increase in the number of people who are living in informal housing. In 1990, 1 billion people were living in informal housing. By 2001, this number had increased to 1.5 billion (UN 2001).

The increase in undernourishment is also due to the increase in the number of people who are living in informal settlements. In 1990, 1 billion people were living in informal settlements. By 2001, this number had increased to 1.5 billion (UN 2001).

The increase in undernourishment is also due to the increase in the number of people who are living in informal housing. In 1990, 1 billion people were living in informal housing. By 2001, this number had increased to 1.5 billion (UN 2001).

The increase in undernourishment is also due to the increase in the number of people who are living in informal settlements. In 1990, 1 billion people were living in informal settlements. By 2001, this number had increased to 1.5 billion (UN 2001).
